

Personal Gemini Journal — Privacy Policy & Statutory Consent Notice

Compliance Framework: Digital Personal Data Protection (DPDP) Act, 2023 & DPDP Rules, 2025 (India)

Effective Date: September 26, 2026 | **Version:** 1.0 (APAC Edition Ideathon Submission)

1. Itemised Notice of Personal Data Collected (DPDP Act Sec 5(1) & Rule 3)

Personal Gemini Journal ('the Application') processes digital personal data provided directly by users ('Data Principals') solely for providing AI-assisted mental wellbeing and journaling services:

- **Authentication Credentials:** Google Account Identity (Name, Email, Google User ID) processed via Firebase Auth. No plaintext passwords stored.
- **Journal Entries & Emotional Reflections:** Private text entries, reflections, and emotional mood inputs logged by the Data Principal.
- **Semantic Memory Embeddings:** 768-dimensional dense vector embeddings generated via Gemini Embedding API ('gemini-embedding-001') stored in Google Cloud Firestore Vector Search.
- **Geo-Location & Weather Data:** Approximate city/regional geolocation coordinates captured to fetch atmospheric weather patterns via Open-Meteo and BigQuery (NOAA GSOD).
- **Usage Telemetry & SaaS Guardrails:** Message frequency counts (enforcing 10 messages per 30-day rolling window).

2. Specific Purpose & Legal Basis of Processing (DPDP Act Sec 6(1))

Processing is strictly conditioned upon explicit, unbundled affirmative consent provided prior to journaling. Data is used exclusively to: (a) generate contextual empathy responses and burnout pattern insights; (b) execute KNN semantic vector retrieval; (c) correlate mood deltas with local weather conditions; and (d) trigger crisis safety net recommendations.

3. Multi-Model AI Orchestrator & Third-Party Processors (DPDP Act Sec 8(2))

To guarantee service resilience, journal prompts may be processed via an automated fallback ladder under strict Data Protection Agreements:

- **Primary Processor:** Google Cloud Vertex AI (Google Cloud Run in 'asia-south1', Mumbai). Models: 'gemini-3.7-flash', 'gemini-3.6-flash', 'gemini-flash-latest'.
- **Secondary Failover Processor:** NVIDIA NIM Microservices (Llama 3.2 / Nemotron) in isolated stateless API containers.
- **Enrichment Worker:** Google Cloud Pub/Sub and BigQuery NOAA public dataset.

4. Storage, Security & Isolation Guarantees (DPDP Act Sec 8(5))

- **Data Residency (SR-1):** All backend compute (Cloud Run) and primary databases reside in Google Cloud Region 'asia-south1' (Mumbai, India).
- **Owner-Bound Firestore Rules:** Multi-tenant security rules ('users/{userId}/{document=**}') ensure users can never access or query cross-tenant journal documents.
- **Secret Management:** API keys and credentials are dynamically injected at runtime via GCP Secret Manager.

5. Rights of Data Principals: Withdrawal, Erasure & Access (DPDP Act Sec 12 & 13)

Data Principals retain absolute statutory rights under the DPDP Act, 2023:

- **Right to Withdraw Consent:** Users may withdraw consent at any time via App Settings with ease comparable to granting consent.
- **Right to Erasure (Sec 8(7)(b)):** Upon withdrawal or account deletion, all journal documents, vector embeddings, and cached analytics are purged within 72 hours.
- **Log Retention (SR-4):** Security and compliance audit logs are retained for exactly 365 days before automatic purging.

6. Data Protection Officer & Grievance Redressal (DPDP Act Sec 8(9) & Rule 12)

For inquiries, rights requests, or statutory grievances, contact the designated Data Protection Officer:

- **DPO Email:** dpo@personal-gemini-journal.internal | **Grievance SLA:** Response within 48 hours, resolution within 30 days.
